

**National Status: Scarce, Native**

**S Hants: Infrequent**

Native

Backs of estuaries and creeks in brackish coastal situations, but also occasionally on shingle where there is a high water table. More rarely an introduction on waste or disturbed ground, and then not tied to the coast; the record in SU5109 which was accepted into the 1996 *Flora* perhaps falls into this category, and the record at SU5313 certainly does. Generally intolerant of grazing although surviving on the pony- and cattle-grazed Stanpit Marsh.

<b>Curdridge</b>	<b>SU5313</b>	<b>2010</b>		
Kitnocks Hill, Curdridge	SU538135	2010	GDF	Good colony on rubble (mounds of earth, cement and chalk waste on farm land off A334, S side opposite Lake House.

### N Hants: Rare

Neophyte

Whilst native in VC11, its natural saline habitat of upper tidal marshes does not occur in VC12 and there it has been artificially introduced.

<b>Leckford, SE of</b>	<b>SU3936</b>	<b>2012</b>		
Leckford, SE of	SU394369	24-Aug-12	ARGM, MR & GCo	Hedgebank, blatant garden escape from neighbouring cottage.
