

**Atriplex laciniata L.****Frosted Orache**  
**1843-2013****National Status: Not Scarce, Native****S Hants: Not Ranked**

Native

A plant of the drift line on sandy beaches or on loosely consolidated shingle, occasionally on waste or open ground by the shore. Some records from areas with no very suitable habitat appear dubious, and were excluded from the map in the 1996 *Flora*, but have been retained here so that they can be checked. Interestingly, even setting aside such records, the map shows more recent sites than the 1996 *Flora*, but like others in the same habitat this species certainly suffers from human pressure in many of its localities, and numbers of plants are often very small. There are also records from Southbourne (SZ19K), Pylewell (SZ39M), Titchfield Haven (SU50G) and Warblington (SU70H).
