

**Oxybasis urbica (Chenopodium urbicum), 1990-2023, at lea Best to Search: mid July - late August**

Yellow highlighting is for sites I favour visiting first

Site Name	Gridref	Date	Comment
Thrupton Race Circuit, S of	SU275450	14-Aug-11	Several plants at SU2757 4504, all with the same strictly upright growth habit. Specimen det. EJC Aug 2011.

I am not sure if there is access here now. Also it is an annual archaeophyte, dependent of disturbed soil for the seeds to germinate, so very unlikely to have persisted.
